

Work done for
Alrick Healthcare

Summary

Alrick Healthcare previously had a long-winded way of generating quotes for customers. In addition to automating the process, they wanted to make the quotes accessible to a number of staff located in different parts of the country.

Price range of work done
US\$10,000-20,000.

Excel custom applications, presenter-led courses, webinar recordings on 60 one-hour topics, Knowledge Base, hotline support and the study and qualification Certified Professional in Excel for Finance.

Quotes with data stored in cloud

The solution uses an Excel front-end with data stored in a back-end SQL Server database located in the Microsoft Azure cloud.

The end result is a PDF for sending to prospects

The end result is a PDF, such as that shown below, that lists products quoted for with photos, prices and amounts. At the click of a button, the application creates an email ready to send with the PDF attached.

Product images appear instantly

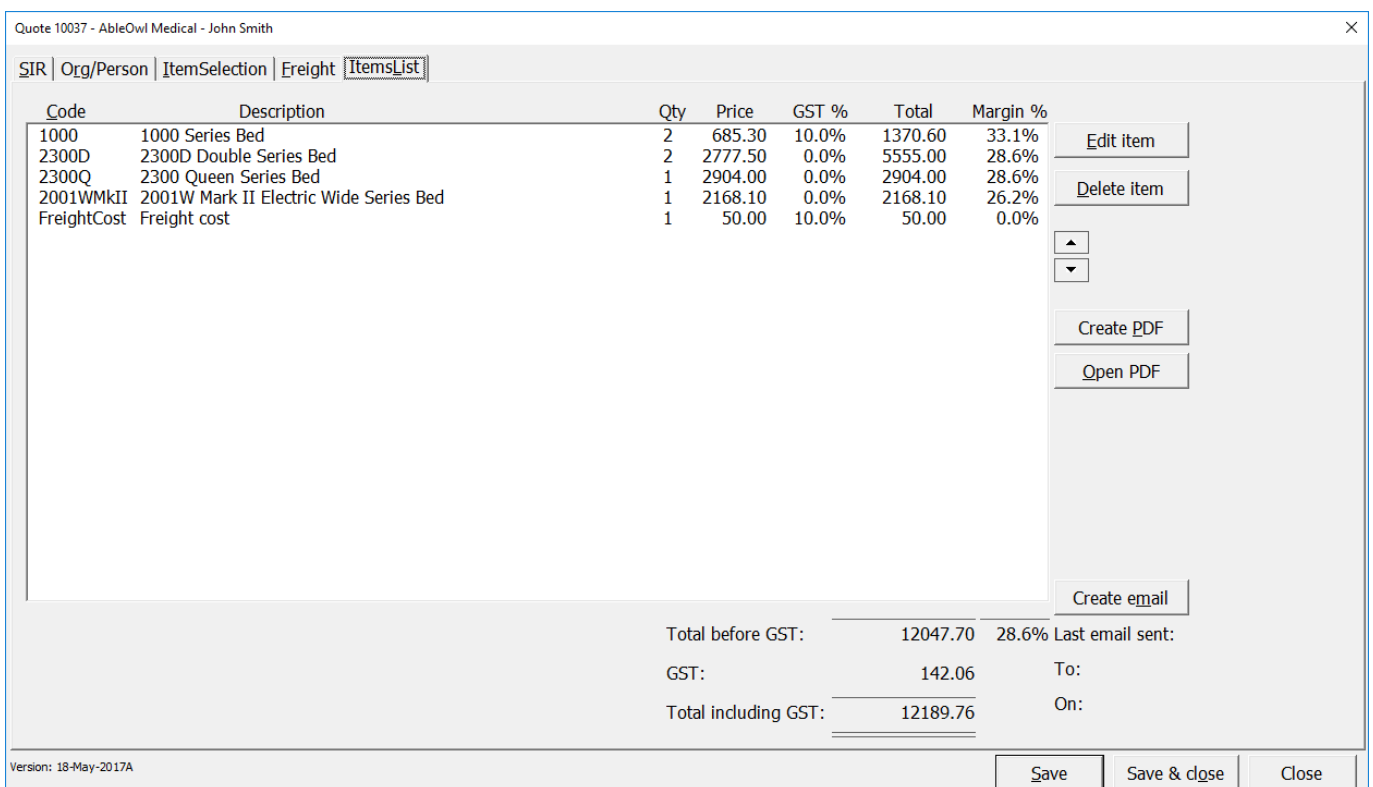

The user completes entries in a dialog box as shown below. When the user selects a product, the dialog box instantly displays the photo of the product. The connection between Excel and SQL Server is very fast.

A product image appears instantly on selecting a product.

A dialog box page lists the items selected and also shows the margin

The user builds up the list of items to include in the quote as shown on the ItemsList dialog box page below. The page also shows the margin. When the quote is complete, the user creates the PDF and opens an email ready to send in Outlook.

The list of selected items displays a total and a margin.

SQL Server in the Microsoft Azure cloud costs little

SQL Server in this application is in the Microsoft Azure cloud. The cost for renting such is minimal (less than \$20/month).

A logon and password controls who can see what

Access to the data is controlled by a logon and password. Different users have different levels of access: salespeople see only their own quotes while managers can see all quotes.

See a list of orders and easily sort it

There is a list of orders such as below. To sort by a certain column, click the column title. To reverse the sort order, click again.

QuoteNo	Organisation	Sales person	Last update	Quote title
10037	AbleOwl Medical	Grant Stephe	12-Jun-17 02:47PM	Example 16

10021	Cherry Tree Manor Care	Paul Oulton	12-Jun-17 01:57PM	Test2

You can filter the list too

You can also filter by typing into the Search box. The dialog box filters to display only those lines that contain the entry typed. The match can be in any column.

10037	AbleOwl Medical	Grant Stephe	12/06/2017 02:47 P	Example 16

A mechanism allows a salesperson to request a special price from a manager

Sometimes, a salesperson wants to offer a special price. To do so, he clicks a certain button that sends an email to a manager for approval. The manager can open the quote, decline or approve the request, make any changes, and click a button to send an email to the salesperson. There is also a dialog box that lists all such requests.

An admin user can make all changes required in Excel

An admin user can make all changes to products, prices and product images from Excel; there is no need to work in SQL Server Manager at all.

Data can easily be extracted to Excel for sales performance reports

Data can easily be extracted from SQL Server to Excel to create various reports on sales performance. Quotes and other data can automatically be loaded into the company CRM application.

Excel provides a high-quality, low-cost, robust, web-based, long-term solution

Salient points to make about the application are:

- The use of SQL Server in the Microsoft Azure cloud makes the application readily available from any location.
- A logon and password restricts who has access to what.
- Excel is great at combining photos, graphics and other entries to create professional-looking PDFs.
- Excel tightly integrates with Outlook for generating emails.
- Unlike browser-based applications, Excel responds instantly, which enables rapid quote generation.
- The rich functionality provided by Excel means that, in expert hands, high quality custom applications can be created rapidly at a fraction of the cost of that in alternative software.
- The stable Excel platform provides a long-term solution, with minimal maintenance costs, in which internal non-IT specialists retain some control.

Rick Mansley says “a process of 15 minutes to create a quote has been reduced to 2.5 to 5 minutes max”.

Rick Mansley, Director, of Alrick Healthcare, says:

“The quote tool has automated a manual process that took a staff member 15 minutes to complete, but which now takes 2.5 to 5 minutes max to complete.”

“The quote tool is so easy to use that instead of only two customer support staff looking after every quote, now everyone can produce their own quotes.”

“AbleOwl have been great to work with. They have supported us with any issue almost instantly.”
